

General comments

Dear Authors, the work you submitted represent wide overview of the LhARA project. It is surely of interest, for the Community, to know the status of this important facility.

On the other hand I strongly think that the structure of this work must be changed in order to improve its readability.

The work, indeed, appears more a technical report other than a scientific paper. It must be reduced. The long technical sections must be deleted while authors should more rapidly concentrate on the characteristics of the final

beams that will be of interest for the community.

-Concluding, the form of the paper should be revised as it is now more a technical note / report.
